Project objective(s)	Increasing agricultural production through supplying adequate prerequisite for certification and quality control of organic agricultural products. Supplying with modern technically- technological prerequisite for quality control . Making prerequisite for getting out on into market.
Short description of all main groups and their needs	<p>Main groups and their needs:</p> <ul style="list-style-type: none"> ▪ Agricultural producer of organic food - have need for certification / standardization of agricultural products in order to quality and effective finding markets on regional and European markets; ▪ Processors of organic production – have need for introduction standards for processing and disposal of mentioned products like basic standard for production who will enable product export; ▪ Municipalities– to acquire education for two employees (counselor and inspector) for certification agricultural products under international standard who will have full inspection in agricultural production and inspection in quantity of disposed products, and with that planned increasement municipalities budget; ▪ Buyers – consumers – will have controlled safe product who is guaranteed under European standard for quality; ▪ Government BiH – will have institution as independent body who verify quality of organic production and enables export oriented production, with competitive on European markets and reducing debalance in exchange of goods BiH with other countries and reaching EU standards (quality control).
Short description (aim) of project	Product of organic origin because of its direct influence on the health of theirs consuments are specific and from that side very demanding in meaning of satisfying appropriate conditions and standards, especially according to regulations by EU and other developed countries whose markets are very interesting to us.Obsolete of technically and technology of ours processors, and absence of adequate systems and institutions wich will be doing controls of quality and certification organic agricultural products, are one of basic reasons unfair competition our manufactures in this area, and their impossibility for export and going out to ino-market. In that sense this project aim is to make possible to attain technicall standards of agricultural products EU through giving technical help («know-how») and administrative (control of quality and products certification) and other necessary supports under international standards.
Expected results	<ul style="list-style-type: none"> ▪ Established domestic Accredited certification house for certification organic and integral production on BiH level; ▪ Establishing trade-mark for agricultural product of NW region; ▪ Training about 340 agricultural production and introduce internationally verify standards for production in NW region ; ▪ Interduced standards with aimed processors of organic production; ▪ Prepared and trained two municipalities employees dipl.ing. agriculture or dipl. Vet., in significant number of municipalities in BiH for working as counselor and inspector organic-integral agricultural production; ▪ Buyers – consumers will have guaranteed quality product; ▪ Government BiH will have reduced debalance and chance for bigger

	investments in organic- integral agricultural production. <ul style="list-style-type: none"> ▪ Supported BiH recognized product. ▪ Support in developing recognized and quality home-made product.
